- 四、請針對以下火羽在溫度層化環境下(Plumes in Temperature Stratified Ambients)的描述,解讀附圖的物理現象。

原文: When a buoyant, turbulent plume rises, it cools by entrainment of ambient air. If the ambient air increases in temperature with height, which is normal in buildings, and the fire source is weak, the temperature difference between the plume and the ambient, which gives the plume buoyancy, may vanish and actually reverse in sign. Eventually the plume ceases to rise.

Figure: Theoretical behavior of centerline plume variables in linearly temperature-stratified ambients. Curve A: ratio of temperature rises (stratified versus unstratified), Curve B: ratio of axial velocities. Curve C: ratio of plume radii. Curve D: ratio of volumetric species concentrations. Where z: height above top of combustible (m) and Zm: maximum vertical penetration of plume fluid in stratified ambient (m)

#### 6-10 題

Mass surveillance uses systems or technologies that collect, analyze, and/or generate data on indefinite or large numbers of people instead of limiting surveillance to individuals about which there is reasonable suspicion of wrongdoing. Under currently available forms of mass surveillance, governments can capture virtually all aspects of our lives. Mass surveillance can subject a population or significant component thereof to indiscriminate monitoring, involving a systematic interference with people's right to privacy and all the rights that privacy enables, including the freedom to express yourself and to protest. People are getting used to being monitored by cameras, having private messages inspected at work, and having conversations recorded by financial institutions or other businesses (such as telecommunication companies). Today, intelligence agencies and law enforcement conduct mass surveillance through a diverse - and increasing - range of means and methods of surveillance. These include the direct mass interception communications, access to the bulk communications stored by telecoms operators and others, mass hacking, indiscriminate use of facial recognition technology, indiscriminate surveillance of protests using mobile phone trackers, and more.

  - (C) How to achieve a balance between people's pursuit of technology and being monitored.
  - (D) How to cope with the human pursuit of technology and the balance of being monitored.

From critical incidents, to large-scale events, to day-to-day operations, police agencies are also using social media tools to enhance communications. If used appropriately, social media can be a great asset to any agency. What's your opinion on the role of social media for today's policing? Use reasons and specific examples to support your arguments.
